

REPUTATION MANAGEMENT PLAY BOOK

INITIAL RESEARCH.
RECOMMENDED
STRATEGIES.
STRATEGIC PLAN.

Weekly meetings. On and off
page optimization...

Reputation Management

Our methods are among the most well-rounded and respected in the industry. We only use “white hat” techniques, also known as White Hat which is the ethical way to engage in search engine optimization. As our client, you have access to

- In-house employees that perform all of the work on your campaigns
- The ability to communicate with your dedicated Project Manager at any time
- Weekly progress calls so you know what is happening with your account at all times.

First Step: Research

We begin with critical research. Our Initial Analysis Reports lay the foundation for the strongest search engine reputation management possible. The reports help us determine the best path for us to help you achieve a return on your investment. The analysis contains large amounts of information we collect in order to take action and direction with your websites. It takes us 2- 3 weeks to aggregate the data, (listed below,) then we deliver the reports to you in an online meeting. These reports allow all parties to understand the scope of the project and help us formulate your Strategic Internet Marketing Plan (SIMP).

Beginning with the baby step of non-committal research gives you the experience of working with our professional team and the means to understand both the opportunities and the obstacles to achieving your goals. Aggregating the data for your reports helps us to know what steps we need to take to help you achieve success. The following describe what's included in our reports:

Keyword Report - Define exact keywords and search phrases that produce negative results for you or your brand. This report also provides search volume estimates used to determine how severe and widespread the problem is.

Overcoming negative content–pushing positive content

Initial Ranking (Benchmark) – Ranking positions for your brand and for each URL that has posted negative content about your brand. This critical component ensures that you are aware of all potentially negative results.

Link Profile Analysis – Comprehensive report detailing all inbound links, anchor text, and age of each link. Used to identify backlinks that may be preventing your site from ranking above negative results.

Site Crawl – Full crawl of all pages, images, and all other elements that are necessary for your website to operate. This report is used to rule out structural issues that may be affecting current rankings.

Offending Result Strength Analysis – It's important to know what we're up against and how long it's going to take to overcome the negative results

Positive Asset Strength Analysis – We also need to know what positive assets we have at our disposal to fix the problem. These can include existing social media assets, Affiliate sites, Micro-sites, Sites with positive content owned by other entities, etc.

On-Page Optimization Recommendations: From title tags to keyword density, and meta-descriptions. The existing on-page optimization of our positive assets needs to be taken into account to combat the issue.

Creation of a content development strategy – Once we know what we have and what we're up against we'll make recommendations on what content needs to be created to combat the issue.

Strategy & Scope of Work Development – Develop and deliver a recommended strategy and Scope of Work that will “push” the result from page one, and beyond, if possible. The strategy will also include expectations for time frames and costs.

Second Step

Develop Strategic Internet Marketing Plan (SIMP)

Based on the data we uncover, we create a custom SIMP that lays-out our path in dominating organic search engine rankings. This plan includes: Plans for your web site: What do we need to fix? Is the code within the web site conducive to the latest search engine algorithms? Is there a path for search engines to easily access optimized content? Can the current web site be properly optimized? What web assets do we have? Do you already have other websites we can use to combat your reputation management issue? To push positive content to the top of the search engines we will likely need several sites that are well optimized for the term to be successful. Very rarely can one or two sites successfully complete the task alone. If you do not already have high authority web assets available, we will look at acquiring some for you. All of these costs are passed directly to your company.

A financial order for your keywords. Some keywords are going to have a greater impact on your business and the exposure of negative content than others. We will prioritize your keywords not simply by the largest search volume to least, but by what negative content we can incrementally remove from your customer's eyes the quickest; thus, producing a positive ROI as efficiently as possible.

Reputation Management Methodologies

On-going Search Engine Reputation Management – may include but is not limited to:

Website Development: Part of the initial launch will be to develop several different sites that we can utilize to push positive content

Overcoming negative content-pushing positive content

On-Page Optimization: On-Page Optimization includes writing new properly optimized content to be posted to the site. This content adheres to all the best practices such as proper keyword density, keyword in the title, keyword in alt tags, proper keyword data in meta-tags, etc. If you so desire and provide back-end access to the site we will post this content for you after your team has reviewed and approved for posting on your main site.

Off-Page Optimization: Not all back-links are equal and you will never find us promise "x" number of back-links since that has little value to you or the end goal of ranking. What we do provide are quality back-links that come from blogs; that specifically talk about the keyword we're trying to optimize for, utilize the keyword as the anchor text, and link back specifically the article we want to rank for that keyword. We highly believe in a sustainable approach to back-links and thus believe in the control of those back-links. When Google makes a change to how they view back-links with an algorithm update we're able to change our approach and make changes to all of the back-links we've previously developed for you. This is how our clients have not only become successful but remain the incumbent winner in their associated spaces.

Toxic Backlink Removal: We will initially look for and then continually monitor for toxic back-links coming from unfavorable back-link neighborhoods, and when discovered we will go through the process to disavow them. We have largely stream-lined the disavow process by continually developing our own software since the announcement of Google's Disavow Tool. Our tool helps locate toxic back-links, requests the site to remove them, automatically checks in 1 week to see if removal has occurred, and then submits a report to Google if they haven't to officially disavow them. This is the documented process that Google requires to disavow toxic back-links. This process can be exceptionally time-consuming if done manually. Our tool does a lot of the heavy lifting, but we combine human intelligence to ensure that ONLY bad links are removed for the best possible results.

Overcoming negative content–pushing positive content

Social Signal Development: Social Signals are beginning to have a significant impact on SEO which will impact our reputation management efforts, and that's why when we post up a new piece of content for a client we develop social signals to that content. This is completed through our social signal network that tweets, +1's, and shares the content. We take a much more gradual approach with existing content as Google would view a lot of social signals about an old piece of content as unnatural.

Weekly Meetings: We believe that we should have weekly meetings with our clients. Search Engine Reputation Management may take time, but we don't believe that our objectives/tasks should take any longer than they need to. By having a regular meeting with us you can keep us accountable, and we'll keep you and your team accountable for the action items that need to take place. In these meetings, we will also be going over reports of the progress of the campaign, and consistently share with you the results of our relationship together.

Reputation Management Ethics

We believe in White Hat SEO, but we actually take our ethics a step further, we pass everything we do through a simple litmus test. There are 5 questions that must be answered of things we think, say or do:

- Is it the Truth?
- Is it Fair to all concerned?
- Will it build Goodwill and Better Friendships?

Not only will we not engage in Underhanded Marketing Techniques or Black Hat SEO techniques, but we will not work with companies that involve Adult themes, Gambling, or activities which we consider morally questionable, or that may exploit anyone.
